<p>Because the inventions of claims 1 and 3 could be easily invented based on the description of document 1 cited in the ISR, they do not appear to involve an inventive step. Adjusting and optimizing the blending quantity of each component in accordance with purposes are generally performed by a person skilled in the art.</p> <p>In addition, as described in document 2 and document 3, because a bromine-based flame retardant such as Tetrabromobisphenol A, etc. is used as equivalent to Octabromodiphenyl, employing the well-known compound instead of Octabromodiphenyl in the invention described in document 1 would be easily achieved by a person skilled in the art.</p> <p>Furthermore, adding a phosphorus flame retardant to a styrene resin composition and adding a foaming agent to form foam, as described in documents 4-6, are commonly performed by a person skilled in the art and therefore, the inventions of claims 2, 4 and 5 also do not appear to involve an inventive step.</p>
